

Our Team

C₂N Diagnostics is a molecular diagnostics company aiming to transform the early diagnosis and early treatment of Alzheimer's disease and related forms of neurodegeneration.

We were formed by scientific co-founders Drs. David Holtzman and Randall Bateman of Washington University School of Medicine in St. Louis, and LifeTech Research, a Maryland-based technology research and commercialization firm. Our CLIA-certified, CAP-accredited clinical laboratory and research laboratory are based in St. Louis, MO.

Our core technology relies on state-of-the art mass spectrometry-based approaches to identify and quantify protein biomarkers that are important in the diagnosis, progression and treatment monitoring of human brain disorders.

We have developed a novel blood-based, in vitro diagnostic laboratory-developed test (LDT) for brain amyloid detection, a pathologic hallmark of Alzheimer's disease. We offer the test under CLIA in most of the US and a CE Mark in the European Union. We are further developing and validating this test for FDA approval under FDA's Breakthrough Devices Designation Program, with the goal of filling a major unmet medical need for a simple, widely accessible, and minimally invasive test to aid in Alzheimer's diagnosis.
